

## High Performance Add-Ons

Exinda Network Orchestrator is designed to be easy-to-use, all-in-one network optimization solutions for mid-sized enterprises and educational institutions.

To provide next-generation network performance, Exinda offers innovative value-added components that give additional power, insight and scale needed for a best-in-class user experience.

## Exinda Mobile

Exinda Mobile is a software-only solution that helps provide high-speed application access to any location without having to install new hardware or reconfigure your network. With Exinda Mobile, users across geographic sites can work together productively in real-time, without being delayed by slow responses or data transfers.

The Exinda Mobile Server can be deployed to optimize applications for an entire site leveraging your existing infrastructure, or the Exinda Mobile PC client can be deployed to optimize applications for an individual remote worker at a home office.

## Exinda Edge Cache

With Exinda Edge Cache, you can conserve valuable network resources and prevent network disruption during mass download events by enabling the single-sided caching of Internet-based content. When web objects are downloaded, Edge Cache stores them at the network's edge so when subsequent requests come in for the same data, it's delivered from the Exinda Edge Cache, rather than being re-downloaded over the WAN. Encrypted HTTPS content is also captured, improving user experience for cloud applications, commercial websites and video sites such as YouTube and Vimeo. Exinda Edge Cache easily prevents network downtime, reduces bandwidth costs and ensures an optimal user experience at all times.

## Highlights

- Centrally manage remote workers and multiple Exinda deployments
- Prevent network outages during software upgrade events
- Keep staff and students from accessing inappropriate content
- Reduce WAN costs and deliver an optimal end user experience

## Exinda Central Management System

The Exinda Central Management System is designed for enterprise network environments looking to centrally manage multi-box Exinda deployments. With secure access via web browser, CMS helps IT managers gain full visibility into network usage and control over applications at any WAN site. Available as both a hosted service and a hardware appliance, CMS further simplifies the task of installing, configuring, monitoring and reporting via Exinda Network Orchestrator.
